Ex.No-2 PANDAS

### AIM:

To analyse and study the best performance point of Reciprocating pumps using Pandas.

#### **PROCEDURE:**

### 1. Dataset Creation:

Create a hypothetical dataset containing information about actual discharge(m3/s), input power(W), and output power(W).

## 2. Correlation Analysis:

Calculate the correlation matrix to examine the relationships between actual Discharge, input power, and output power using pandas'corr()' function.

# 3. Efficiency calculation:

Calculate the efficiency for each input value using the given formula: Efficiency(%)

= Output\_power/Input\_power \*100

### 4. Head calculation:

Calculate the total head for each performance using the given formula : Head (m) =  $output\_power/actual \ discharge \ *\rho g$ 

### 5. Best Efficiency Point (BEP):

Identify the Best Efficiency Point of the reciprocating pump from

the efficiency by selecting the highest index values using the pandas' 'nlargest()'

function

### **PROGRAM:**

```
import pandas as pd data={
    'Actual Discharge':[40,50,60,70,80,90],
    'Input Power':[1,2,3,4,5,10],
    'Output Power':[70,30,90,100,140,170]
}
density=1000 gravity=9.81
a=pd.DataFrame(data)
a['Efficiency']=(a['Output Power']/a['Input Power'])*100
a['Head']=(a['Output Power']/a['Actual Discharge'])/(density*gravity) corr_matrix=a.corr()
print(corr_matrix)
max_efficiency=corr_matrix['Efficiency'].nlargest(2).iloc[1]
print("\nParameter with the highest correlation with efficiency=",max_efficiency)
```

### **OUTPUT:**

|                  | Actual Discharge | Input Power | Output Power | Efficiency | 1 |
|------------------|------------------|-------------|--------------|------------|---|
| Actual Discharge | 1.000000         | 0.922018    | 0.901611     | -0.614487  |   |
| Input Power      | 0.922018         | 1.000000    | 0.881684     | -0.533271  |   |
| Output Power     | 0.901611         | 0.881684    | 1.000000     | -0.227847  |   |
| Efficiency       | -0.614487        | -0.533271   | -0.227847    | 1.000000   |   |
| Head             | 0.466245         | 0.489913    | 0.797480     | 0.391574   |   |
|                  | Head             |             |              |            |   |
| Actual Discharge | 0.466245         |             |              |            |   |
| Input Power      | 0.489913         |             |              |            |   |
| Output Power     | 0.797480         |             |              |            |   |
| Efficiency       | 0.391574         |             |              |            |   |
| Head             | 1.000000         |             |              |            |   |

Parameter with the highest correlation with efficiency= 0.3915744643953921

## **Result:**

The programs were run successfully
